

Soybeans

TOPGUARD[®] Fungicide — Protection that is Built to Last

TOPGUARD[®] Fungicide is a highly systemic fungicide with translaminar activity. These properties allow the product to protect the sprayed leaf and to be moved to new growth for prevention of new disease development.

TOPGUARD Fungicide has one of the longest disease control time-frames of any fungicide available which makes it a great first product with added residual protection. **TOPGUARD Fungicide's** systemicity protects new leaves as they emerge. It is rainfast within two hours and does not cause green stem in soybeans or wheat.

TOPGUARD Fungicide can be tank-mixed with other fungicides, insecticides and herbicides for even greater application flexibility and application economics.

Corn

Sugar Beets

Cucurbits

Wheat
